

monza  **Lumbar**

Product photos

Manufacturing company ▪ Clover Orthopedics s.r.l.

Distributor company ▪ Clover Orthopedics s.r.l.

Trading name ▪ Monza Lumbar

Product type The Monza line of interbody cages consists of cages made of trabecular titanium available for both posterior (PLIF), transforaminal (TLIF) and lateral (LLIF) approaches. The cages for transforaminal approach are also available in both the fixed and rotating versions, in which the cage can articulate with the holder to allow a progressive rotation of the same in the interbody space.

Materials ▪ Implantable Titanium

Indications When used appropriately, Clover Orthopedics Monza lumbar interbody fusion cages are indicated to favor the development of a solid intervertebral fusion at the lumbar / lumbosacral level of the spine. They are indicated in cases of degenerative disc disease, pseudarthrosis, spondylolisthesis or vertebral deformities, when anterior arthrodesis is necessary. Its use with autologous, homologous, heterologous or synthetic bone graft is recommended to obtain fusion. It is necessary to use an additional posterior or anterior vertebral instrumentation system for optimal stabilization of the operated segment. Any surgical decisions other than those recommended by the manufacturer are at the discretion and responsibility of the surgeon.

Contraindications The contraindications of Clover Orthopedics Monza interbody fusion cages are similar to those of similar products on the market, and include, but are not limited to:

Absolute contraindications

- Infections in the active phase;
- Allergy to the materials used.
- LLIF not suitable for plant; or in L5-S1 *
- LLIF not indicated for degenerative spondylolisthesis grade > 2;
- Patients who are uncooperative and unable to follow prescriptions.

* Access is not suitable for treating the L5-S1 level, as it would be hindered by the presence of the iliac crest.

Relative contraindications

- Metastasis;
- Severe muscular, neurological, or vascular diseases;
- Fever or leukocytosis;
- Pregnancy, except for the treatment of unstable vertebral fractures;
- Signs of inflammation in the implant site;
- Inadequate soft tissue coverage at the surgery site;
- High grade osteoporosis.

If the implantation of Clover Orthopedics Monza interbody cages is considered the best solution for the patient, and if the latter has one or more of the contraindications indicated above, it is essential to inform him of the possible negative consequences that this entails in the success of the operation

Product features	<ul style="list-style-type: none"> ▪ The system consists of a series of implantable titanium lumbar cages of different sizes, made using "3D Printing" technology. ▪ The cage for transforaminal approach is available both in the fixed version and in the rotating version, in which the cage can progressively rotate on the holder to allow its optimal positioning ▪ The LLIF Approach Cage is available in both solid and cannulated versions to allow for placement through guide wire.
Packaging and sterilization	<ul style="list-style-type: none"> ▪ The system is washed and packaged inside a double sealed PE + Tyvek medical bag suitable for ETO sterilization.
Brand	<ul style="list-style-type: none"> ▪ Clover Orthopedics
Class	<ul style="list-style-type: none"> ▪ IIb
Certifications	<ul style="list-style-type: none"> ▪ CE mark (0426)
